

Straw Oboe

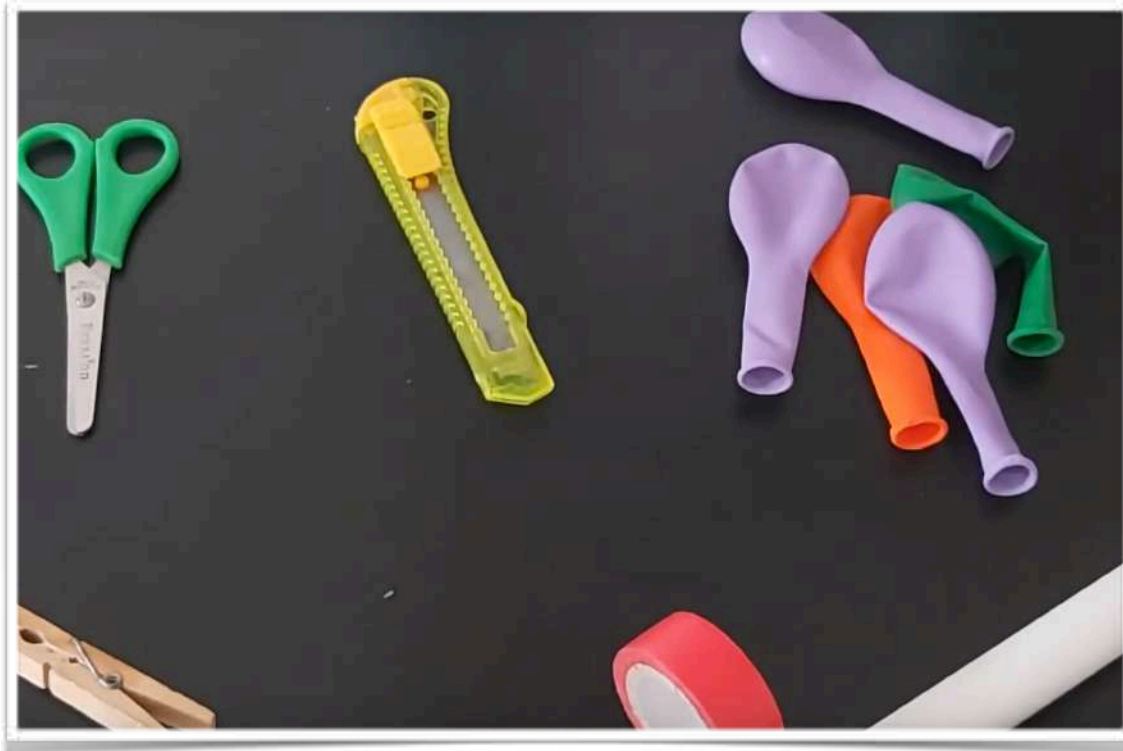

1. **Gather plastic drinking straws and scissors.**
2. **Take a straw and flatten one end using your fingers or your teeth.**
3. **Cut both sides of the flattened end diagonally, in a triangle shape.**
4. **Create four finger holes by cutting small triangles into the straw. Don't make the holes too big.**
5. **Hold the straw with your fingertips on the holes and blow until music comes up.**
6. **It takes a few blows into the straw to find the right vibration that will produce sound. Be patient!**

Balloon clarinet
